This study explores the differential effect of two types of corrective feedback strategies – explicit and implicit – on the acquisition and retention of correct past form of irregular verbs by Iranian English as Foreign Language (EFL) learners. Sixty out of 80 pre-intermediate EFL learners were selected as the participants, based on their performance on Key English Test (KET); their scores were between one standard deviation (*SD*) above and below the mean (*M*). Thereafter, they were randomly assigned into two experimental groups: the explicit group (*N* = 30) who received explicit corrective feedback and the implicit group (*N* = 30), who received implicit feedback. Results indicate that the explicit group outperformed the implicit group on the immediate and delayed post-tests. The findings of this study have theoretical and pedagogical implications for teachers. Feedback strategy provides teachers with information on effective teaching and student comprehension, and encourages them to use technology in a way that reduces anxiety and facilitates social learning.

Keywords: acquisition; computer mediated communication (CMC); electronic mail (email); interactional feedback; past tense; retention

Introduction

Second language learners require feedback on errors when they are not able to discover how their interlanguage differs from the target language (White, 1988, cited in Tatawy, 2006).

According to Long's updated Interaction Hypothesis (1996), feedback obtained during conversational interaction promotes interlanguage development; interaction connects input, internal learner capacities, especially selective attention and output opportunities, and comprehensible input influences acquisition of second language. Long (1977, 1996) and Lyster (2004, cited in Lyster & Satio, 2010) widely concur that interactional feedback prompts second language (L2) development.

Since the seventies, Second Language Acquisition (SLA) researchers have investigated the role of interactional feedback in second language classroom. Long (1977) maintains that feedback obtained during negotiation work might have a facilitative role in L2 development in vocabulary, morphology, and syntax. According to Schmidt (2001), conscious noticing of language forms is necessary for learning to take place.

Philp, Oliver and Mackey (2006) argue that interactional feedback refers to the feedback obtained during the interaction. It is an indication to the learner that the use of the target language is incorrect (Lightbown & Spada, 2002). As Long (1996) states, interaction can play a key role in driving L2 development forward, because learners rely on semantically contingent speech as a primary source of positive and negative L2 data.

Based on descriptive studies of teacher-student interaction (Lyster, 2002; Lyster, 1998, cited in Ellis, 2009), feedback occurs as one of these three types: explicit correction, recasts, or prompts. *Explicit correction* and recasts supply learners with target reformulations of their non-target output. In explicit correction, the teacher supplies the correct form, and clearly indicates that what the student is saying is incorrect. For *recasts*, the teacher implicitly reformulates all or part of the student's utterance, where *prompts* include a variety of signals (other than alternative reformulations) that push learners to self-repair.

December (1997) states that CMC is a process of human communication via computers that involves people and situates them in a particular context to engage in processes to shape media for a variety of purposes. So, feedback is provided through symmetrical (learner-to-learner) or asymmetrical (expert-to-learner) exchange via synchronous (text chat) or asynchronous (message board) CMC (O'Rourke, 2005, cited in Lee, 2011).

As Lee (2011) puts it, CMC has been taken up to allow foreign language learners to interact with each other in the target language. According to him, during online interaction, learners get input, attend to feedback, and produce output. CMC interaction is based on integrationists' theory in SLA, which holds that learners who interact with the task can make connections between form and meaning, and this can benefit them (Long, 1996; Pica, 1994). Lee (2009) considers the benefits of CMC as supplying rich input, promoting pushed output, providing plentiful and dynamic feedback, focusing learners' attention on aspects of the target language, and enhancing noticing. Researchers such as Pena-Shaff and Nicholls (2004, cited in Motallebzadeh & Amirabadi, 2011) report that CMC has been employed in a variety of contexts to replace face-to-face communication.

By the advent of the internet as a means of communication and prevalence of computers in the teaching and learning process, more and more people have been using electronic media to cover their purposes such as interpersonal communication, sending and receiving information, etc. Computers also make new ways of

teaching and learning, new activities, new products, and new types of learning possible (Kozma & Schank, 1998, cited in Murchú, 2005).

Warschauer (1995, cited in Hosseini, 2013) emphasises the role of e-mail in CMC, and says that e-mail is the most important application regarding the internet. According to Barson, Frommer and Schwartz (1993, cited in Hosseini, 2013), using computer technologies can help learners increase their opportunities to use the target language. Electronic mail (e-mail) provides immediate feedback and allows students to discuss and communicate directly, cheaply, quickly, and reliably. Previous research suggests that email can facilitate communication (Cooper & Selfe, 1990, cited in Alzu'bi & Sabha, 2013), reduce anxiety (Kern, 1995, as cited in Alzu'bi & Sabha, 2013), facilitate social learning (Belz, 2002, cited in Alzu'bi & Sabha, 2013), and improve writing skills (Warschauer, 1996, cited in Alzu'bi & Sabha, 2013).

In a study by Mushangwe (2014), 20 participants from different African countries studying Chinese for three months at Hebei University, were investigated using the voice recognition application on smartphones. The researcher used tablets for pronunciation practice purposes, to boost students' confidence in spoken Chinese. Here, the technology is used as the decoding person representing how a native Chinese will decode the learner's speech. The results indicated that during the exercise, participants become better aware of their errors and corrected their pronunciation. In addition, technology helped them to find the pronunciation stability of the learners. Based on this study, it was concluded that game-like traits of voice recognition application on smartphones help language learners to exercise spoken Chinese. It can be stated that this approach elevates self-evaluation and interest in learning any language.

This study investigates the effect of corrective feedback through e-mail on the correct use of the past forms of irregular verbs by Iranian pre-intermediate EFL learners in written communication format. In Iran, no attempt has ever been made to assess the effectiveness of corrective feedback via email in the correct use of English past tense. Therefore, the findings of this study might help to enhance the practices of EFL for teachers and learners. Previous studies have revealed that high school students have a great deal of problems with target language syntax and proper use of structures. Therefore, this study attempts to accentuate syntactic and structural problems and offer strategies to enhance learners' ability to successfully deal with problems of this sort.

To do so, this study addresses two major questions:

1. Is implicit feedback via email more effective than explicit feedback via email in acquisition of the

correct past tense of irregular verbs by Iranian EFL learners?

2. Is implicit feedback via email more effective than explicit feedback via email in retention of the correct past tense of irregular verbs by Iranian EFL learners?

Methodology

Participants

The population from which participants were chosen included 80 female Iranian pre-intermediate EFL learners. Their native language was Persian. From among them, 60 learners were selected as the participants of the study based on their performance on KET (2009), developed by Cambridge; their scores fell between one *SD* above and below the *M*. Thereafter, they were randomly assigned into two groups: experimental group 1 ($N = 30$) that received explicit corrective feedback and experimental group 2 ($N = 30$) that got implicit feedback after sending their mail to the researcher. The limited number of learners at the mentioned high school did not allow the researcher to have a control group similar to experimental groups.

These participants took part in this study voluntarily, according to their access to the internet out of the class sessions and were presented with their regular course books developed by the Ministry of Education in Iran.

In addition to these students and the researcher, an experienced teacher took part in this study. The experienced teacher, familiar with different teaching strategies, had the responsibility of teaching English past tense during treatment.

Instruments

To answer the research questions presented by the researcher, the following instruments were used: placement test (KET), English Book 1, the internet and email, and two post-tests.

Key English test (The KET)

The KET used in this study was the test developed by Cambridge in 2009. KET is an elementary level qualification. It covers everyday practical English, and helps learners to understand simple questions and instructions (Green & Jay, 2005). The test has 56 reading and writing items, for which one hour and 10 minutes is allotted for answering. Each item has one score, and the last one has five scores, so these skills make up 50 percent of the total score. Listening items need 25 minutes, and the allotted time for speaking is 8-10 minutes. The total score for the test is 100; listening and speaking carry 25 percent of the final mark. The candidates' scores allow them to see how they performed. The reliability of this test was assured by administering it to a group similar to the participants. The Kuder and Richardson Formula 21 (KR-21) reliability index for the KET was .85.

This test was administered as a language proficiency test prior to the treatment to make sure that the participants were of approximately equal level of language proficiency and of grammar knowledge.

Course book

The "English Book 1" developed by the Ministry of Education in Iran was used during the experiment. This textbook is taught three hours per week in Iranian high schools. It includes nine lessons. Each lesson consists of nine different parts: (A) New Words, (B) Reading, (C) Comprehension, (D) Speak Out, (E) Write It Down, (F) Language Functions, (G) Pronunciation Practice, (H) Vocabulary Review, and (I) Vocabulary List.

E-mail

E-mail provides immediate feedback and allows students to discuss and communicate directly, cheaply, quickly, and reliably. Previous research suggests that e-mail can facilitate communication (Cooper & Selfe, 1990, cited in Alzu'bi & Sabha, 2013), reduce anxiety (Kern, 1995, cited in Alzu'bi & Sabha, 2013), facilitate social learning (Belz, 2002, cited in Alzu'bi & Sabha, 2013), and improve writing skills (Warschauer, 1996, cited in Alzu'bi & Sabha, 2013).

Immediate and one-week delayed post-test

Two post-tests - immediate and delayed - were used to determine the effect of explicit and implicit feedback on the acquisition and retention of correct past tense of irregular verbs, respectively. The immediate post-test, administered immediately after the treatment, was an International English Language Testing System (IELTS) test, which included 25 grammatical items about the past tense. The first part of these items included 17 multiple-choice questions, where the students had to select the correct form of verbs. The second part consisted of two simple paragraphs with eight blanks; the students had to fill in the blanks and write the correct form of the verbs by means of the words enclosed within the parentheses, and in the third part, they had to write a paragraph about an event which was related to their childhood. It is worth mentioning that all the topics and tests were within the participants' vocabulary and grammar knowledge.

The delayed post-test was given to students one week after the treatment. This test included a writing activity requiring participants to write a paragraph about their previous trip. The length of the paragraph had to be between 20-30 sentences. They had to use the correct form of past tense verbs.

Design and Procedure

The present study was conducted in a quasi-experimental design, as there was no true random-

isation. The students were placed in classes on the basis of certain criteria, such as their scores on the KET and their access to the internet. They were divided into two groups, Experimental Group 1 that received explicit feedback, and Experimental Group 2 that got implicit feedback after sending their mail, writings on the topics provided, to the researcher. The limited number of learners in the mentioned high school did not allow the researcher to have a control group similar to experimental groups.

The teacher taught English past tense as well as irregular verbs and provided the participants with eight writing topics during the experiment, once a week, for eight weeks. Students were required to send their writing to the researcher through e-mail. Having received the feedback, the participants of the experimental groups were compelled to send their modified output as an independent e-mail prior to receiving the next new topic, in order to make sure of the students' noticing the researcher-provided feedback.

Experimental Group 1 received explicit feedback, that is, having identified that an error had been made, the researcher indicated it and provided the correction; the correct form was required to be used by the participants in their modified output.

Example (1), asynchronous explicit feedback

The participant: *I forget my English book, if I had enough time I comed back home.*

Researcher's feedback: *I forgot my English book, if I had enough time I came back home (you should say I forgot my English book not *I forget), if I had enough time I came back home (you should say I came back home not *I comed back home).*

Modified output by the participant: *I forgot my English book, if I had enough time I came back home.*

Experimental Group 2 received implicit repetition feedback, that is, having highlighted the error by means of emphatic stress or underlined bolded uppercase words, the researcher repeated the learner's utterance, of which reformulation by the participants was required in the modified output. It was emphasised that the underlined bolded uppercase words had nothing to do with spelling mistakes.

Example (2), asynchronous implicit feedback

The participant: *... On Friday we went to my aunt's home. Then we went to the park and eat dinner. We had a very good time there.*

Researcher's feedback: *... On Friday we went to my aunt's home. Then we went to the park and **EAT** dinner. We had a very good time there.*

Modified output by the participant: *... On Friday we went to my aunt's home. Then we went to the park and ate dinner. We had a very good time there.*

At the end of the treatment, the researcher gave the two mentioned post-tests to the participants in order to determine the extent to which the treatment was

successful in enhancing their ability to correctly apply simple past tense. Learners' improvement in using correct past form of irregular verbs was assessed through items included in the post-tests: writing a composition, completion test, filling in the blank, and changing the sentences into simple past tense.

The participants had to use the correct form of past tense verbs. Whenever they wrote the verbs correctly, they got the mark.

The immediate post-test was an IELTS test, which included 25 grammatical items about past tense. The total score for grammatical items was 25, with each item worth one mark. The first part of these items included 17 multiple-choice questions that the students had to select the correct form of verbs. The second part included two simple paragraphs with eight blanks that students filled in and wrote the correct form of the verbs by means of the words enclosed within the parentheses. In the third part, they had to write a paragraph about an event related to their childhood. If they wrote a complete composition with 20-30 sentences and used the correct form of past tense verbs, they would get 10 marks. This test was administered to determine the effect of the mentioned feedbacks on the acquisition of correct past tense of irregular verbs by the participants.

The delayed post-test included a writing activity for each student, where they were required to write a paragraph about their previous trip. The length of the paragraph had to be between 20-30 sentences, and the participants did their work in the classroom. The total score for writing the assignment was 25. If they wrote a composition of 20-30 sentences and used the correct form of the past tense verbs, they would get 10 marks. The researcher administered this test to determine the effect of implicit and explicit feedback on the retention of correct past tense of irregular verbs by the participants.

The scores for two post-tests entered into an Excel worksheet as either correct (1); or incorrect (0); based on whether the students were able to produce the target form in written output in English. Whenever a student answered correctly, she got one mark for the correct output.

Data Analysis

The gathered data was analysed by using the Statistical Package for the Social Sciences (SPSS) program presenting descriptive statistics of frequency to find the most and the least scores of Iranian EFL learners for using the correct form of simple past tense. In addition, to see whether there was any significant difference between two groups in acquisition and retention of correct past form of irregular verbs, regarding explicit or implicit feedback received by them, the parametric independent

t-tests were used.

Results

Testing Assumptions

This study investigates the effect of two types of feedback - explicit and implicit - on the acquisition and retention of correct past tense of irregular verbs by Iranian EFL learners. An independent *t*-test was used to compare the groups' performance on the immediate and delayed post-tests.

KET, General Language Proficiency Test

In order to have participants of approximately equal level of language proficiency, the researcher administered the KET general language proficiency test to 80 EFL learners. Sixty students who scored between 1 standard deviation below and above the mean were selected to participate in the study. The descriptive statistics for the KET are displayed in Table 1.

Table 1 Descriptive statistics, KET

	<i>N</i>	Mean	Variance	KR-21
KET 80	80	37.95	54.622	.85
Valid <i>N</i> (list wise)	80	(7.391)		

Note: Standard deviations (*SD*) appears in parentheses below *M*.

Testing Research Hypothesis 1

In response to the first research question concerning the differential impact of explicit and implicit corrective feedback on acquisition of correct past tense of irregular verbs, the groups' means were compared. As it is evident from Table 2, Explicit group ($M = 30.07$, $SD = 4.63$) outperformed Implicit group ($M = 21.87$, $SD = 3.74$) on the immediate post-test.

Testing Research Hypothesis 2

In response to the second research question concerning the differential impact of explicit and implicit corrective feedback on retention of correct past tense of irregular verbs, the groups' means were compared. As Table 3 displays, the Explicit group ($M = 26.07$, $SD = 2.13$) showed a significantly higher rate of retention than the Implicit group ($M = 22.30$, $SD = 2.53$).

Discussion

The present study was an attempt toward investigating the effect of explicit and implicit feedback via email on acquisition and retention of the correct past tense form of irregular English verbs by Iranian EFL learners. Therefore, the following two hypotheses were formulated:

H₁: Implicit feedback via e-mail is more effective than explicit feedback via email in acquisition of the correct past tense of irregular verbs by Iranian EFL learners.

H₂: Implicit feedback via e-mail is more

effective than explicit feedback via email in retention of the correct past tense of irregular verbs by Iranian EFL learners.

As far as the first hypothesis is concerned, the results of an independent *t*-test revealed a significant difference between the two groups' performance on the immediate post-test, administered to determine the effect of implicit and explicit feed-

back via e-mail on acquisition of the correct past tense of irregular verbs. The explicit group ($M = 30.07$, $SD = 4.63$) outperformed the implicit group ($M = 21.87$, $SD = 3.74$) on the immediate post-test. In other words, it appears conclusive that the Iranian EFL learners have acquired the past tense better, when using the explicit feedback strategy of teaching grammar.

Table 2 Independent samples *t*-test, Immediate post-test by groups

	Levene's Test for Equality of Variances		<i>t</i> -test for Equality of Means					95% Confidence Interval of the Difference	
	<i>F</i>	Sig.	<i>t</i>	<i>df</i>	Sig. (2-tailed)	Mean Difference	Std. Error Difference	Lower	Upper
Equal variances assumed	3.575*	.064	7.531	58	.000	8.200	1.089	6.021	10.379
Equal variances not assumed			7.531	55.554	.000	8.200	1.089	6.019	10.381

Note: * = $p > .05$. *F* (F-test), sig (Statistical testing of significance, *df* (degree of freedom), *p* (probability value).

Table 3 Independent samples *t*-test, delayed post-test by groups

	Levene's Test for Equality of Variances		<i>t</i> -test for Equality of Means					95% Confidence Interval of the Difference	
	<i>F</i>	Sig.	<i>t</i>	<i>df</i>	Sig. (2-tailed)	Mean Difference	Std. Error Difference	Lower	Upper
Equal variances assumed	1.346*	.251	6.229	58	.000	3.767	.605	2.556	4.977
Equal variances not assumed			6.229	56.351	.000	3.767	.605	2.555	4.978

Note: * = $p > .05$. Since (*p*) was 0.05, hypothesis two was rejected.

The second hypothesis was tested by applying the independent *t*-test. The results indicated a significant difference between the two groups' performance on the delayed post-test, administered to determine the effect of implicit and explicit feedback via email on retention of the correct past tense of irregular verbs. That is, the Iranian EFL learners have retained the past tense better using the explicit feedback strategy of teaching grammar.

This can be due to a variety of factors; when Iranian EFL learners make a mistake, generally, they tend to rely on their teachers to provide them with correct structures. So, they react when teachers explicitly identify the error, correct it, and require them to modify their language. As a result, they tend to use erroneous structures less frequently, for which teachers provide some clues.

In this study, Experimental Group 2 (implicit group) simply failed to notice the researcher-provided feedback, because the participants did not receive any information on the formal aspects. Second, the bolded uppercase words may have misguided them into wrongly correcting and changing the word itself, or adding unnecessary words without realising incorrect parts.

Psychological factors may affect the participants' performance on tests. It can be claimed that reminding learners of their mistakes in the presence of their classmates might have acted as psychological barrier to their uptaking of the teacher provided feedback and resulted in inefficacy of the treatment. To minimise the negative effect of such factors, the researcher provided the participants with feedback through e-mail; since previous research suggests that email can facilitate communication (Cooper & Selfe, 1990, as cited in Alzu'bi & Sabha, 2013), reduce anxiety (Kern, 1995, cited in Alzu'bi & Sabha, 2013), facilitate social learning (Belz, 2002, cited in Alzu'bi & Sabha, 2013), and improve writing skills (Warschauer, 1996, cited in Alzu'bi & Sabha, 2013). Participants themselves asked the researcher not to be reminded of their mistakes in the presence of their classmates.

According to the findings of this study, feedback strategy provides teachers with data on effective teaching and student comprehension, and CMC encourages them to use technology in pedagogical environments. It may be more effective to think about CMC and using it for Iranian EFL learners as a suitable way to increase negotiation of

meaning, because students are forced to use English through e-mail, although teachers can create significant learning through giving the appropriate feedback. As Brown (2000, cited in Hosseini, 2013) mentions, negative feedback can cause frustration for students, so they perceive that their writings are disastrous, but computers in the writing class have been shown to have a generally positive impact on students' performance in language acquisition.

Teaching English as a foreign language (TEFL) teachers who use technology in their classes should know that the successful use of email for educational purposes will be largely determined by how well it meets the identified needs of their learners.

Some other studies highlight the positive effect of technology on improving different language skills as well as components. Findings of the study conducted by Motalebzadeh and Amirabadi (2011) indicated that e-collaboration/e-partnering could improve learners writing skills if integrated into the EFL curriculum designed for pre-intermediate level.

In their study on Asynchronous Computer Mediated Communication (ACMC), St. John and Cash (1995) found that an adult language learner dramatically improved his German via e-mail exchanges with a native speaker. They concluded that ACMC via email exchanges could improve learners' grammar and linguistic awareness through corrective feedback (cited in Hosseini, 2013).

Several studies in CMC have shown the positive effects of synchronous interaction on: (a) conversational communication skills (Chun, 1994, cited in Lee, 2009; Kitade, 2000, cited in Lee, 2009); (b) morphosyntactic development (Pelletieri, 1999, cited in Lee, 2009; Salaberry, 2000, cited in Lee, 2009); (c) quality and quantity of production of learner output (Beauvois, 1998, cited in Lee, 2009; Kern, 1995, cited in Alzu'bi & Sabha, 2013; Kitade, 2000, cited in Lee, 2009); (d) amount and equality of participation (Beauvios, 1998, cited in Lee, 2009; Chun, 1994, cited in Lee, 2009; Kern, 1995, cited in Alzu'bi & Sabha, 2013); (e) participant roles (Abrams, 2001, cited in Lee, 2009; Bohlke, 2003, cited in Lee, 2009; Darhower, 2002, cited in Lee, 2009; Warschauer, 1996, cited in Alzu'bi & Sabha, 2013); and (f) negotiation of meaning (Blake, 2000, cited in Lee, 2009; Fernandez-Garcia & Martin-Arbelaz, 2002, 2003, cited in Lee, 2009; Pellettieri, 2000, cited in Lee, 2009; and Smith, 2003a, cited in Lee, 2009).

This study provides valuable findings in the education field, but some limitations are attributed to this study. First, the level of proficiency of learners was low, and it was possible that more proficient learners would have performed differently. Second, the study did not have any control group, because the researcher could not access a

group with similar characteristics and a large number of participants. Third, it should be accepted that most previous research on corrective feedback and positive contributions to grammar accuracy and different English tenses have been conducted in written, oral, and chat forms. Therefore, generalisations to asynchronous computer-mediation via e-mail, especially in EFL environments, should be done with great caution.

Conclusion

On the basis of the results of the present study, it became evident that explicit corrective feedback had a significant effect on increasing the correct use of English past tense. However, implicit corrective feedback did not have any significant effect on Iranian EFL learners regarding the second experimental group's performance. The findings of the present study also had further implications as to the efficacy of computer-mediated feedback as a medium on different aspects of language grammar.

One of the advantages of CMC in many general educational situations is the immediacy of feedback (Atkinson & Davis, 2000, cited in Najafi, 2007). Choen (2003, cited in Dadabeigloo, 2011) believes that classroom conversation includes teacher interaction, student response, and teacher follow up. In Iranian L2 classrooms, real conversation rarely happens. However, Iranian students usually use their first language to solve their communication problems (conversation breakdown) in real exchanges. Consequently, this often does not lead to meaningful negotiation in English. Accordingly, it may be more effective to think about CMC and using it for Iranian EFL learners as a suitable way to increase negotiation of meaning; email can materialise this to some extent.

Despite the limitations mentioned, it is believed that the findings of this study are encouraging as technology has been finding its way into pedagogical environments. Feedback is commonly used in the classroom, but it is essential to investigate the efficacy of technology and its further implications in EFL classes, because the increasing use of technology for feedback purposes has been less explored. Additionally, and with respect to the results of this study, it should be mentioned that the study indicates that technology has an important role not only for Iranian learners, but also for all around the world including South Africans. Furthermore, for Iranian and other researchers, there is still plenty of room for further research in this field.

Complete the telephone conversation between two friends.

What does Josh say to Matt?

For questions **16 – 20**, mark the correct letter **A – H** on your answer sheet.

Example:

Matt: Hi, Josh. It's Matt.

Josh: **0** **C**

Answer:

0	A	B	C	D	E	F	G	H
<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Matt: Oh, sorry. I'm phoning about the skateboarding competition this afternoon.

Josh: **16**

Matt: Really? There was some information about it in our club magazine.

Josh: **17**

Matt: Just from 2.30 till 5 pm. They give out the prizes at 6 pm.

Josh: **18**

Matt: The prizes are better this time. The top prize is a skateboard.

Josh: **19**

Matt: You're much better than you were last year!

Josh: **20**

Matt: Great! See you then.

A I'd like a new one but I don't think I'm good enough to win.

B I didn't see it. Is the competition on all afternoon?

C Hi. You're calling early!

D Do the winners get CDs like last year?

E I wasn't very good then.

F I didn't know that was today.

G I haven't got one of those.

H Maybe, we'll see. Shall we meet in the park at 2.00?

Reading and Writing • Part 4

Questions 21 – 27

Read the article about a young swimmer.

Are sentences **21 – 27** 'Right' (**A**) or 'Wrong' (**B**)?

If there is not enough information to answer 'Right' (**A**) or 'Wrong' (**B**), choose 'Doesn't say' (**C**).

For questions **21 – 27**, mark **A**, **B** or **C** on your answer sheet.

Ana Johnson

Ana Johnson is a 13-year-old swimmer who lives in Melbourne in Australia. Her dream is to swim for Australia in the next Olympics.

She swims in both long and short races and she has already come first in many important competitions.

As well as spending many hours in the pool, Ana also makes time for studying and for friends. 'I have lots of friends who swim and we're very close. It's much easier to have friends who are swimmers because they also have to get up early to practise like me and they understand this kind of life. But I'm not so different from other people my age. In my free time I also enjoy going to the movies and parties. There are also some good things about swimming for a club. I travel a lot for competitions and I've made friends with swimmers from other Australian cities and from other parts of the world.'

Ana is becoming well known in Australia and she believes it is important to get more young people interested in swimming. 'I don't mind talking to journalists and having my photograph taken. But last year I was on TV and that was much more fun.'

Example:

0 Ana's home is in Melbourne.

A Right **B** Wrong **C** Doesn't say

Answer:

0	A	B	C
<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

21 Ana hopes she will become an Olympic swimmer.

A Right **B** Wrong **C** Doesn't say

22 Ana knows that she is better at short races than long ones.

A Right **B** Wrong **C** Doesn't say

23 Ana has won a lot of swimming competitions.

A Right **B** Wrong **C** Doesn't say

24 It is difficult for Ana to make friends with other people who swim.

A Right **B** Wrong **C** Doesn't say

25 Ana likes doing the same things as other teenagers.

A Right **B** Wrong **C** Doesn't say

26 Ana has met people from different countries at swimming competitions.

A Right **B** Wrong **C** Doesn't say

27 Ana prefers speaking to journalists to being on television.

A Right **B** Wrong **C** Doesn't say

Reading and Writing • Part 5

Read the invitation and the email.

Fill in the information in Louisa's notes.

For questions **51 – 55**, write the information on your answer sheet.

Come to an ice-skating party
on Saturday
at
Park Ice Rink

Starts at 1.30 p.m.

You won't need any money
but bring a warm sweater.

Let me know if you can come
by Thursday.

Sara

From:	<input style="width: 85%;" type="text" value="Carla"/>
To:	<input style="width: 85%;" type="text" value="Louisa"/>

Shall we go to Sara's ice-skating party together? My dad will take us in the car but we'll need to come back by bus. We'll drive to yours and get you at 12.30. Ring me this afternoon on my mobile (07816 212185) or after 6 p.m. at home (366387) to let me know.

Louisa's Notes

Ice-skating party

Person having party: Sara

Day: **51**

Time: **52**

Take: **53**

Travel there by: **54**

Carla's evening phone number: **55**

Reading and Writing • Part 9

Question 56

Read the email from your English friend, Alex.

From:	Alex
To:	

It's great you can come to my house this evening to watch a DVD. What time can you come? Which DVD do you want to watch? What would you like to eat?

Write an email to Alex and answer the questions.

Write **25 – 35** words.

Write the email on your answer sheet.

Do not write your answer here.

**You must write your answer for Part 9
on your Answer Sheet.**
